 there is still time to register yourself and a team!*

*If you only have one day to spare for your
 professional growth, spend a day with NCSM.*

How can leaders effectively lead for equity and social justice in mathematics? The conversation around equity and social justice needs to go beyond just a conversation. This complex and challenging work requires attention to the issues surrounding equity and social justice in mathematics as well as knowledge, understanding, and resources to make changes at the local level. Presenters will actively engage participants and guide them through adaptable research-informed practices, strategies, models, and concepts that effective mathematics education leaders need to know and integrate into their work around making mathematics education just and equitable for all students.

PRESENTERS

NORA RAMIREZ
 Executive Director of TODOS

Nora Ramirez is the Executive Director of TODOS: Mathematics for All and the Immediate Past President of the Arizona Association of Teachers of Mathematics. She currently works as an independent mathematics education consultant in rural, urban, and suburban schools.

LINDA FULMORE
 NCSM Position Paper Editor

Linda Fulmore is currently the Position Papers Editor for NCSM and previously served as 1st and 2nd Vice-President and secretary. She is an education consultant, chair of NCTM's Mathematics Education Trust Board, and treasurer of TODOS Mathematics for All.

CONNIE SCHROCK
 NCSM President

Connie Schrock is currently the President of NCSM and previously served as 1st and 2nd Vice-President and other positions. She also co-authored the NCSM *Great Tasks for Mathematics* resources. Connie is a professor of mathematics and economics at Emporia State University.

WHY YOU SHOULD ATTEND:

- because you are an aspiring or seasoned mathematics education leader, department chair, teacher, coach, supervisor, or administrator; and
- because you want to lead your school and district toward student success by ensuring high expectations and access to meaningful mathematics learning for every student.

NCSM is striving to provide professional learning opportunities that help build mathematics leaders at all levels. These opportunities will address current issues and topics and provide mathematics leaders with the time for quality conversations with leaders from other regions, states, and countries around these tough topics. Participants engage in rich mathematical content in a variety of venues and learn research-based strategies to bring back to their local school district.

FOR MATHEMATICS TEACHERS AND LEADERS!
